4 Other information on palm oil (sustainability reports, policies, other public information)

Our understanding of sustainable and socially responsible economic activity includes a sustainable raw material acquisition and the protection of natural resources.

Especially when applying renewable raw materials, not only the economic but especially the ecological and social consequences have to be considered.

The example of "palm oil economy" demonstrates: The increasing world-wide exploitation of economically unused regions – e.g. the rain forests – as cultivating areas for the food and fuel industry, gradually threatens their continuity and therefore the biological variety and the livelihood of the local population.

The RSPO has the target to support sustainable production of palm oil and to prevent the destruction of the rain forests. In the long term, 100% of the produced palm oil and palm seed oil should derive from sustainable production.

RAPS GmbH & Co. KG purchases palm oil exclusively from suppliers who are members of the RSPO.
