- Son numerosos los retos que se presentan en el proceso de inclusión de los pequeños productores independientes (PPI) en la adopción de los Principios y Criterios (P&C) de la RSPO. No obstante, desde hace varios años se ha venido desarrollando un proceso progresivo de integración de los PPI mediante la implementación de un plan de gestión que incorpora un componente organizativo, así como capacitaciones técnicas orientadas a la adopción de buenas prácticas agrícolas, ambientales y sociales. Este plan también incluye sesiones de inducción sobre la normativa RSPO y contempla la provisión de asistencia técnica directa a las fincas de los productores independientes. Se prevé fortalecer este proceso durante el presente año y en los años venideros, con miras a lograr una participación más efectiva y sostenible de los PPI en el marco de la certificación RSPO.

- Adicionalmente, muchas de las fincas de los pequeños productores independientes se ubican en zonas vulnerables a inundaciones, por lo que resultaron significativamente afectadas por las tormentas tropicales que impactaron la región durante los meses de noviembre y diciembre de 2024. Estas afectaciones han provocado una marcada inestabilidad económica entre los productores, así como un retraso considerable en la ejecución de los proyectos de inclusión de los PPI en los Principios y Criterios (P&C) de la RSPO. Otro aspecto relevante a considerar es la complejidad de los trámites gubernamentales, los cuales, por su carácter burocrático y prolongado, también contribuyen al retraso de las actividades programadas dentro del plan de gestión

En el ámbito industrial, se ha priorizado la ejecución de los siguientes proyectos estratégicos:

1. Mejoramiento del sistema de tratamiento de aguas residuales, orientado a la captación de gas metano generado en el proceso, con el propósito de aprovecharlo como combustible en la generación de energía, contribuyendo así a la reducción de emisiones y al uso eficiente de los recursos disponibles.
2. Proyecto de optimización de la generación de vapor, con un doble objetivo: por un lado, mejorar la producción de energía eléctrica; por otro, incrementar la eficiencia de los procesos de extracción de aceite crudo. Para ello, se ha implementado una caldera industrial Mechmar con una capacidad de 30 toneladas de vapor por hora. Este equipo incorpora un sistema de filtración de gases tipo Vorsep, el cual permite una separación eficiente de partículas, reduciendo así la carga contaminante de las emisiones liberadas a la atmósfera.
