4. TimeBound Plan

4.1 Which year did your company achieve (or plans to achieve) its first RSPO P&C certification?

('2028',)

4.2 Which year did your company achieve (or plans to achieve) 100% RSPO certification for all its estates and mills?

('2030',)

4.2.1 If the previous target year for G.4.2 has not been met, please explain why

Due to the national ban on oil palm cultivation in Sri Lanka, many growers have been discouraged from investing in long-term sustainability initiatives like RSPO certification. As an independent mill, we have no control over the management decisions of the estates we source from, so we cannot mandate them to become certified. While we continue to raise awareness and encourage sustainable practices, many suppliers lack the knowledge or resources to pursue certification on their own. These challenges make it difficult to certify all our suppliers by 2030, despite our ongoing efforts.

4.4 Which year did your company achieve (or plans to achieve) 100% RSPO certification for all FFB, regardless of source?

('2030',)

4.4.1 If the previous target year for G.4.4 has not been met, please explain why

Due to the national ban on oil palm cultivation in Sri Lanka, many growers have been discouraged from investing in long-term sustainability initiatives like RSPO certification. As an independent mill, we have no control over the management decisions of the estates we source from, so we cannot mandate them to become certified. While we continue to raise awareness and encourage sustainable practices, many suppliers lack the knowledge or resources to pursue certification on their own. These challenges make it difficult to certify all our suppliers by 2030, despite our ongoing efforts.

6. GHG Footprint

6.1 Has your company started quantifying its GHG emissions and monitoring?

No

6.1.2 No. Please explain why your company has yet to start GHG emissions tracking and monitoring

We plan to begin GHG emissions monitoring from this year (2025) as part of our ongoing sustainability efforts. As an independent mill, we currently lack detailed information about the field operations data of our FFB suppliers, which makes it challenging to calculate full supply chain emissions. However, we are committed to starting with the data available at the mill level and we will gradually expand our tracking to our suppliers.

6.2.1 What is the average GHG emissions by hectare (tCO₂e/ha) for all certified management units in this reporting year?

0.0

6.2.2 What is the average GHG emissions per tonne of crude palm oil (tCO₂e/tCPO) for all certified management units in this reporting year?

0.0

6.3 What are the key emission sources identified by your company in certified management units?

- ☐ Land use change
- ☐ Existing cultivation peatland
- ☒ Palm oil mill effluent (POME)
- ☐ Fertiliser application
- ☐ Others

Others

-

6.4.1 Does your company have a long-term target?

No

6.4.1.2 No. Please explain why your company did not have an emissions target, and forecast how your emissions will change over the next five years?

The company has only started calculating GHG emissions from this year (2025) and is still in the process of gathering accurate data. As a result, we have not yet set a base year, which is essential for establishing realistic and measurable long-term targets. Our current priority is to complete the initial assessments and determine a reliable baseline. Once this is in place, we will work towards setting clear targets to guide our emissions reduction efforts.

6.5 Does your company have an annual GHG emissions reduction/minimising target?

No

6.5_No No, identify the reason(s) :

No, our company does not currently have an annual GHG emissions reduction target for certified management units, as we operate as an independent mill and do not have any certified suppliers under our direct management. However, we have carried out the following action as an independent mill to attempt in reducing/minimizing GHG emissions. For Palm Oil Mill Effluent (POME), our company has implemented a Zero Liquid Discharge (ZLD) system, effectively eliminating GHG emissions from wastewater treatment processes. In addition, emissions from the boiler stack and generators are monitored every four months by a certified third party. All measured pollutant levels remain within the acceptable limits set by the Sri Lanka Central Environmental Authority.

7. Support for Oil Palm Smallholders

7.1 How is your company supporting Independent Smallholder groups?

To promote the uptake of Certified Sustainable Palm Oil (CSPO) in the downstream supply chain, the company will hold informational sessions for buyers to educate them on the benefits of CSPO and its role in sustainable sourcing. This will help encourage buyers to prioritize CSPO in their supply chains.
