6.1.2 What method are you currently using to assess your operational GHG footprint?

-

6.2 GHG footprint

6.2.1 What is the average GHG footprint by - hectare (tCO₂e/ha)?

433.00

6.2.2 What is the average GHG footprint by - tonne of crude palm oil (tCO₂e/tCPO)?

0.46

6.3 What would be the key emission sources identified?

CO₂ emission from fertiliser, NO₂ emission and land conservation

6.4 What measures are currently being taken to reduce GHG emissions?

A fertilization plan has been integrated, which through ground analysis, determines the amount of fertilizers needed by the ground and thus avoid using more fertilizers in areas where they aren't necessary. Likewise, it has been decided to add byproducts from the extraction plant to the ground, in order to minimize the use of fertilizers.

An important mitigation measure is the piling of lagoons of the wastewater treatment plant of the mill, capturing all the methane and using it for the generation of energy. It is worth mentioning that a biomass boiler has been installed in the mill, avoiding using the energy of the national grid.

7. Actions for Next Reporting Period

7.1 Outline activities that you will undertake in the coming year to advance your certification efforts.
